## 1 General Information

### 1.1 Personal

Lehrstuhl für Netzarchitekturen und Netzdienste	<a href="mailto:christian@grothoff.org">christian@grothoff.org</a>
Institut für Informatik	<a href="http://grothoff.org/christian/">http://grothoff.org/christian/</a>
Technische Universität München	Phone (priv): +49-89-315-66689
Boltzmannstraße 3	Phone (work): +49-89-289-18040
D-85748 Garching	Fax (work): +49-89-289-18033

Born February 28, 1977 in Germany. Citizen of Germany.

### 1.2 Brief Biography

Christian Grothoff is currently on the faculty of the Technische Universität München leading an Emmy-Noether research group in the area of computer networks. He earned his PhD in computer science from UCLA, an M.S. in computer science from Purdue University, and both a Diplom II in mathematics and the first Staatsexamen in chemistry from the Bergische Universität Gesamthochschule (BUGH) Wuppertal. His research interests include compilers, programming languages, software engineering, networking and security.

### 1.3 Education and Employment History

1996–2000	Diplom II ( $\approx$ M.S) in mathematics at BUGH Wuppertal
1996–2001	1. Staatsexamen ( $\approx$ B.S.) in chemistry at BUGH Wuppertal
2000–2003	M.S. in CS at Purdue University, West Lafayette, IN
2000–2005	PhD student in CS at Purdue University, West Lafayette, IN
2005–2006	PhD student in CS at UCLA, CA
2006–2009	Assistant Professor in CS at the University of Denver, CO
2008–2009	Joint appointment in ECE at the University of Denver, CO
2009–	Emmy Noether research group leader at TU München

### 1.4 Honors

1998–2000	Kurt-Hansen Fellowship
1999–2000	Delphi Automotive sponsored Thesis
2000	DAAD Fellowship
2002	Upsilon Pi Epsilon Honor Society (Purdue)
2009–	DFG Emmy-Noether Junior Research Group Leader

## 1.5 Professional Associations

Christian Grothoff is member of the Electronic Frontier Foundation, the Gesellschaft für Informatik, associate member of the Free Software Foundation, and maintainer of three GNU packages.

## 2 Research

### 2.1 Publications

*H*-index: 11 (according to Arnet Miner).

## References

## 2.2 Software Systems

Unless otherwise noted, Christian Grothoff is the primary author of each of the applications and tools listed below. The systems are available from their respective webpages which are all linked from <http://grothoff.org/christian/>.

## **CaSSiS**

CaSSiS is a fast and scalable software package for computing comprehensive collections of sequence- and sequence-group-specific oligonucleotide signatures from large sets of hierarchically clustered nucleic acid sequence data. CaSSiS was primarily written by Kai Bader; Grothoff contributed in particular with respect to understanding and improving performance-critical parts of the design and implementation.

## **doodle**

Doodle is a desktop search engine based on suffix trees. The focus of the design is on low memory consumption and fast search. Doodle has been integrated by other developers into Evidence, the file manager for the next-generation of the Enlightenment window manager.

## **The DUP System**

DUP is a mini-language for writing distributed and parallel streaming applications using multi-stream pipelines. The DUP system includes the DUP runtime and a collection of supporting multi-stream stages or filters. It is currently being used in several active research collaborations with groups from Technische Universität München, University of Denver and UCLA.

## **GNUnet**

GNUnet is a framework for secure peer-to-peer networking that does not use any centralized or otherwise trusted services. A first service implemented on top of the networking layer allows anonymous censorship-resistant file-sharing. GNUnet uses a simple, excess-based economic model to allocate resources. Peers in GNUnet monitor each others behavior with respect to resource usage; peers that contribute to the network are rewarded with better service.

GNUnet is part of the GNU project. The codebase consists of about 200,000 lines of C code, developed with contributions from over 30 developers worldwide. Grothoff has published five papers on GNUnet.

## **Hitsuji**

Hitsuji is a framework for control flow analysis of large Java applications. The framework currently implements class hierarchy analysis, 0-CFA (using subsets or unification) and a type-safe variant of 0-CFA called TSMI (again using subsets or unification).

## Jamit

Jamit, the Java Access Modifier Inference Tool was originally written by Ted Witkamp and Vids Samanta under Grothoff's direction. Grothoff has since taken over maintenance of the codebase. Jamit infers the tightest access modifiers for Java code that will still allow the code to compile. The analysis is useful in increasing security, guiding the programmer to places where encapsulation could be increased, eliminating dead code, and possibly allowing later analyses to perform additional optimizations based on the tighter access rules.

## Kacheck/J

Kacheck/J is an encapsulation checker for Java. It infers which types are confined according to the definition given in [3]. Objects of confined type do not escape their enclosing package. The fact that references to objects of confined type are limited to their defining package can be useful in managing aliasing. Kacheck/J is the first kind of tool that performs this kind of type-checking or type-inference operation on extremely large codebases. For example, processing Eclipse (over 30,000 classes including JDK) can be performed in a couple of minutes on a modern machine.

## GNU libextractor

*libextractor* is a library used to extract meta-data from files of arbitrary type. It is designed to use plugins that perform the actual extraction. *libextractor* is a GNU package. The goal is to provide developers of file-sharing networks and search tools with a universal library to obtain metadata and keywords to match against queries. *libextractor* currently supports the following formats: HTML, PDF, PS, OLE2 (DOC, XLS, PPT), OpenOffice (sxw), StarOffice (sdw), DVI, MAN, MP3 (ID3v1 and ID3v2), OGG, WAV, JPEG, EXIV2, GIF, PNG, TIFF, DEB, RPM, TAR(.GZ), ZIP, ELF, REAL, RIFF (AVI), MPEG, QT and ASF. *libextractor* consists of more than 80,000 lines of C and C++ code with bindings to Java, Perl, Python and PHP.

## GNU libmicrohttpd

*libmicrohttpd* is a library providing a simple, high-level abstraction for implementing HTTP servers. The focus of the project is to provide a compact, secure, reentrant, HTTP 1.1 compliant and easy to use implementation. The initial design of the API was done together with Dr. GauthierDickey and given in his networking class as a course project. The first release used code produced by the students as a starting point. *libmicrohttpd* is a GNU package. In May 2011, *libmicrohttpd* ranked in the top five out of over 500

“HTTP Server”-related projects in terms of popularity in the *freshmeat.net* database.

### **LiT**

LiT, short for Lost in Translation, is a steganographic encoder written by Ryan Stutsman under supervision from Christian Grothoff. LiT hides information in the noise that is inherent in natural language translation.

### **OVM**

OVM is a real-time Java Virtual Machine developed over the course of over three years by a group at Purdue University. Christian Grothoff was involved in the design and development from the start and contributed to most parts of the system.

### **Runabout**

The Runabout is an extension of the Java libraries that adds two-argument multi-dispatch to Java without changing the language or the VM. Like the Walkabout, the Runabout uses reflection to find visit methods. But instead of invoking the visit methods with reflection, the Runabout uses dynamic code generation to create code at runtime that will invoke the appropriate visit method. This puts the Runabout closer to MultiJava, a Java source compiler that compiles Java with multi-methods to ordinary Java bytecode. Unlike MultiJava, the Runabout runs when the application is executed, and not at compile time. Writing code with the Runabout is very similar to writing visitors or multi methods with MultiJava.

The dispatch in the Runabout is only about a factor of 3 slower than ordinary uni- or double dispatch (on Sun’s JDK 1.4.1 for 10 million invocations) while saving huge amounts of trivial code and adding extensibility to the dispatch that could not be achieved otherwise. The original proposal has since spawned various successor projects by other researchers, including the Sprintabout and Poly/J.

### **X10**

X10 is a new high-performance, high-productivity programming language developed by IBM research. Christian Grothoff was part of the core team that developed and continues to evolve the initial prototype compiler and virtual machine.

### **XTC**

XTC is a fork of the OVM codebase that focuses on delivering an extensible architecture for program analysis and compilation. It contains components

for basic bytecode operations (parsing, management and writing), an SSA-based intermediate representation, and a program analysis framework.

### 2.3 Talks and Panels

- 2002** DefCon 10, on “GNUnet”
- 2002** Midwest Society for Programming Languages and Systems, on “The Runabout”
- 2004** Privacy Enhancing Technologies (PET) Workshop, on “Mix Cascades vs. Peer-to-Peer: Is One Concept Superior?” (Panel)
- 2005** Linux User Group (LUG) Camp, on “libextractor and GNUnet”
- 2005** DefCon 13, on “Lost in Translation”
- 2005** Southern California Workshop on Programming Languages and Systems, on “A Type System for Distributed Arrays”
- 2006** Front Range Information Security Conference (FRISC), on “Lost in Translation”
- 2006** International Conference on Object Oriented Programming, Systems Languages and Applications (OOPSLA), on “Young Guns/OO: The Next Generation” (Panel)
- 2007** DefCon 14, on “Routing in the Dark: Pitch Black”
- 2008** Rocky Mountain IPv6 Summit, on “Migrating Code to IPv6”
- 2008** University of Helsinki, on “Secure File-Sharing in the GNUnet Peer-to-Peer Framework”
- 2008** DefCon 15, on “De-Tor-iorate Anonymity”
- 2008** University of Dortmund, on “Secure File-Sharing in the GNUnet Peer-to-Peer Framework”
- 2008** University of Darmstadt, on “Secure File-Sharing in the GNUnet Peer-to-Peer Framework”
- 2008** Information Technology Study Group (ITSG) Fall Workshop, on “Anonymity” (Panel)
- 2008** University of California Los Angeles (UCLA), on “The DUP System”
- 2009** University of Mainz, on “Towards Productive Parallel Programming”

- 2009** Front Range Architecture Compilers Tools And Languages (FRAC-TAL) Workshop, on  
“Productive Parallel Programming for the Masses”
- 2009** Fórum Internacional do Software Livre, on  
“Free Software for Privacy” (Keynote)
- 2009** Fórum Internacional do Software Livre, on  
“The GUNet Peer-to-Peer Framework”
- 2009** Fórum Internacional do Software Livre, on  
“Tor and GUNet: The Future of Internet Privacy” (Panel)
- 2010** GI-Beirat der Universitätsprofessoren, on  
“Fast Primer Search with DUP”
- 2010** Linux User Group (LUG) Camp, on  
“Spaß mit paralleler und verteilter Programmierung”
- 2010** Linux User Group (LUG) Camp, on “ARM statt INIT”
- 2010** University of Wuppertal, on  
“Distributed Stream Processing with the DUP System”
- 2010** GNU Hacker Meeting (GHM), on  
“The GUNet Peer-to-Peer framework”

## 2.4 Funding

- NSF 0416969 “Curriculum Development Initiative in Cyber Trust at the University of Denver” (co-PI, \$296,831). The primary goal of this grant was to establish a computer security center at the University of Denver. As part of his work on the grant, Christian Grothoff helped establish the Colorado Research Institute for Security and Privacy and obtain an NSA designation as a Center for Excellence in Information Assurance for the University of Denver. He also organized several regional conferences and workshops in the area of computer security. The award duration is from September 2004 to August 2009; I became a co-PI on this grant in August 2007.
- WIRED “Innovative Partnership for Job Creation and Employment” (co-PI, \$405,000). The goal of the computer science part of the grant was to establish a new course and certificate program in mainframe administration at the University of Denver and to provide scholarships for underemployed IT administrators and programmers to help them obtain a certification as mainframe administrators. Christian Grothoff

was responsible for the computer science portion, which is also supported by IBM with software and equipment valued at approximately \$5,000,000. The program started July 2008 and ended December 2009. In January 2010 IBM announced that one of the scholarship recipients who participated in my Mainframe course won IBM's Master of the Mainframe Contest (1st out of over 3,000 contestants).

- nlnet “Fast and Resilient Routing for GUNet” (PI, \$33,901). The goal of the proposed work was to design and implement a secure P2P routing protocol that will achieve availability and scalability without infringing on the openness of the network. The design targets fully-decentralized, restricted-route networks with malicious participants. The project started January 2009 and ended December 2009 culminating in the GUNet 0.8.1 release which contains a prototype of such an algorithm.
- United States Department of Defense (DoD) Information Assurance Scholarship Program (IASP) Grant (PI, \$2,280 plus option for up to \$354,352). Under this grant, the DoD will fund up to 10 graduate students from the National Defense University to study information security at the University of Denver. The program started July 2009 and ends June 2010. Funding started after I left the US for Technische Universität München; the project was handed over to my co-PI.
- NSF “Collaborative-Research: A Partnership for Developing the IA Workforce”. The goal of this grant is to help the University of the District of Columbia build a quality program in information assurance (co-PI, \$299,978). Funding started after I left the US for Technische Universität München; the project was handed over to another co-PI.
- Deutsche Forschungsgesellschaft “Secure Randomized Peer-to-Peer Routing Protocols” (PI, €668,800). This project is about the design, analysis and implementation of new secure and efficient routing protocols for open heterogeneous networks. Funding started September 2009 and has been approved for 36 months.
- Cloudmark Inc. (\$5,000). Unrestricted gift to lab in appreciation of our work on GNU libmicrohttpd (2010).

### 3 Teaching

#### 3.1 Teaching at the University of Denver

- Instructor for “Compilers” (graduate level)
- Instructor for “Computer Security” (graduate level, 2x)

- Instructor for “Computer Security from a Free Software Perspective” (freshmen seminar, non-majors)
- Instructor for “Distributed Stream Processing” (graduate level)
- Instructor for “Introduction to Systems Programming” (undergraduate level)
- Instructor for “Mainframe Administration” (undergraduate, graduate and non-traditional students)
- Instructor for “Programming Languages” (both undergraduate and graduate students, 3x)
- Instructor for “UNIX tools” (undergraduate level)

### **3.2 Teaching at Technische Universität München**

- Co-Instructor for “Masterkurs Rechnernetze” (graduate level)
- Co-Instructor for “Peer-to-Peer Systems and Security” (graduate level)

## **4 Service**

### **4.1 Service to BUGH Wuppertal**

Christian Grothoff was a member of the student representation (AStA) at the BUGH Wuppertal. He served for four years in the office for ecologies and later also as volunteer system administrator for 50 users.

### **4.2 Service to Purdue University**

Christian Grothoff served for one year on the graduate student board, and represented the graduate students on the faculty graduate committee for the computer science department.

### **4.3 Service to the University of Denver**

Christian Grothoff served as associate director of the DU nanotechnology center and was a senior academic analyst for the Privacy Foundation. He was a founding faculty member for the Colorado Research Institute for Security and Privacy (CRISP). He also served as a member of the Steering Committee for the Rocky Mountain IPv6 Task Force.

- SECS PROF grant review committee (2006-2007)
- Establishment and administration of Subversion assignment submission system (2006-2008)

- Computer Science Facilities Committee (2006-2009)
- Dean's Advisory Committee (2007-2008)
- University Technology Council (2007-2008)
- Faculty Search Committee (2007-2009)
- Nano-Technology Center Finance Committee (2008-2009)
- PhD Committee for J. Treinen (Advisor: R. Thurimella, 2009)

#### 4.4 Service to the Technische Universität München

Christian Grothoff participated in the FP8 Expert Group "Services in the future Internet" for the European Commission in 2011.

#### 4.5 Reviews

- ACM SIGPLAN Conference on Object-oriented Programming, Systems, Languages and Applications (OOPSLA)
- IEEE Conference on E-Commerce Technology (CEC)
- ACM SIGPLAN Conference on Programming Language Design and Implementation (PLDI)
- International Conference on Compiler Construction (CC)
- IEEE Transactions on Information Forensics and Security
- ACM Transactions on Programming Languages and Systems (TOPLAS)
- Journal of Information and Computation
- Journal of Systems and Software (Elsevier)
- Transactions on Aspect-Oriented Software Development
- Transactions on Data Hiding and Multimedia Security
- Information Hiding (IH)
- European Symposium on Programming (ESOP)
- NSF Panel
- Netherlands Organization for Scientific Research

#### 4.6 Conferences

- 2007** Initiated and organized the Front Range Architecture Compilers Tools And Languages (FRACTAL) workshop series together with Sanjay Rajopadhye.
- 2007** Organized FRISC (Front Range Information Security Conference) together with Ramki Thurimella and Chris GauthierDickey
- 2008** Organized the Rocky Mountain IPv6 Summit together with the Rocky Mountain IPv6 Task Force
- 2008** DU Faculty Mentor for Computer And Network Vulnerability Assessment Simulation (CANVAS)
- 2008** Organized Front Range Architecture Compilers Tools And Languages (FRACTAL) workshop together with Manish Vachharajani
- 2009** Organized the IRocky Mountain IPv6 Summit together with the Rocky Mountain IPv6 Task Force
